## TECHNICAL DATA SHEET: C-23 CLEANER

### Product Overview

C-23 was developed as a grease and crud-cutter for removing oils and other hard to remove surface contaminants. C-23 has been tested on our entire coatings line and is recommended as an effective maintenance degreaser.

### Uses and Benefits

C-23 is a Citric-based cleaner designed to cut through grease, soap scum and other hard to remove films. It should be used to cut through surface contaminants to do the hard work presented by oils, grease and tough to remove materials.

### Surface Preparation

Sweep up loose dirt and debris before beginning wet cleaning.

### Mixing

Dilution of 1:1 may be required to avoid excessive foaming and to lessen the aggressiveness of the cleaner on gloss surfaces. Can be used in an auto scrubber at 1:1 dilution.

### Application

Apply liberally to surface and agitate with soft bristle brush. Rinse with clean water.

\* Dispose of material, containers, solvents, etc., per Federal, State and local guideline, rules and laws
